Professional Summary

Passionate Computer Science and Engineering student seeking an opportunity to work in the software industry, Curious and adaptable individual with a growth mindset, committed to continuous learning and contributing meaningfully in a collaborative environment.

Education

Bachelor Of Engineering (B.E) - Computer Science and Engineering

KVG College Of Engineering, Sullia

CGPA : 7.34 | Expected Graduation: 2027

Technical Skills

Programming Languages : Python, JavaScript, SQL

Web Technologies : HTML, CSS, React.js

Databases : MySQL, MongoDB

Cloud & Tools : AWS, GitHub, VS Code, Netlify.

Projects

1. Smart Document Chatbot

Languages/Technologies Used: Python, HTML, CSS, JavaScript, Streamlit, LangChain, FAISS, Google Gemini API

Description: Developed an AI-powered chatbot that answers user queries from uploaded PDF documents using semantic search.

Problem Solved: Reduced document search time by providing fast and accurate responses.

2. SafeZone – Community Safety Map

Languages/Technologies Used: Python, HTML, CSS, JavaScript, Flask, MySQL, Google Maps API, Geolocation API

Description: Built a web application that allows users to report and view unsafe locations on an interactive map.

Problem Solved: Improved community safety by helping users identify high-risk areas.

3. Complaint & Issue Tracker

Languages/Technologies Used: HTML, CSS, JavaScript, LocalStorage

Description: Developed a complaint management system for submitting, tracking, and organizing issues.

Problem Solved: Simplified complaint handling and improved issue tracking efficiency.
